

Foreword

On 3–5 September 2001, an international conference “Logic and Complexity in Computer Science” was organized in Créteil, near Paris, to honor the 60th birthday of Anatol Slissenko. A lot of researchers from France, Germany, Israel, Poland, Russia, Ukraine and USA participated in this event and a large number of invited and contributed papers of high quality were presented. Most of the authors were related to A.O. Slissenko as students or colleagues, and topics of the conference were connected with his scientific interests. The conference program and photo album can be found at the web site <http://www.univ-paris12.fr/laci/LCCS2001/>. This issue contains a selection of papers presented in the conference. The selected papers have been fully refereed to the journal standards. We would like to thank the anonymous referees who contributed to make this issue possible.
